Methods for increasing storage stability of FGF or its variant in a liquid or lyophilised composition is also provided. The method is useful for increasing storage stability of a pharmaceutical composition comprising FGF or its variant which becomes oxidised during storage. The pharmaceutical composition is useful for promoting tissue regeneration, treating wounds, ischaemic heart diseases, stroke and is used for bone fracture healing. The present sequence is bovine FGF-2 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                growth factor-2 (FGF-2) to a patient in two doses, where a single dose is administered into each leg of the patient within a one hour period. FGF-2 is useful for treating peripheral artery disease, improving peak walking time with intermittent claudication, improving ankle branchial index with intermittent claudication, reducing body pain, improving stair climbing ability and reducing the severity of the claudication. FGF-2 is also useful for treating or preventing peripheral artery disease (PAD) including claudication and critical limb ischaemia, and even those suffering from a wide spectrum of related clinical ailments including coronary artery disease (CAD), myocardial infarctions, stroke, diabetes dyslipidaemias, hypertension and patients who have had surgical or catheter-based revascularisations. The present sequence represents bovine 155 amino acid FGF-2 protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAW20029 is a recombinant bovine basic fibroblast growth factor (bFGF). Recombinant bFGF is used to promote healing of wounds, bone fractures, damaged myocardial tissue etc. and, since it increases neuronal survival and promotes neurite outgrowth, may also be used in treatment of neurological disorders such as Alzheimer's and Parkinson's diseases. bFGF may also be used for detection of specific inhibitors; for treatment of cell cultures in vitro before transplant and for inducing release of tissue plasminogen activator or collagenase, e.g. for treatment of a chronic tendency to form embolism. Recombinant bFGF can

One or more positively-charged AAs in the heparin-binding domain (AAs 128-138) are replaced by neutral or negatively-charged residues as indicated in the feature table. A recombinant vector (pUC9-TSF11 or pUC9delH3-pTSF-3) contg. the mutated DNA can be used to transform bacterial or mammalian host cells for prodn. of the analogue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Recombinant DNA encoding new fibroblast growth analogues - useful eg for accelerating wound he to control neovascularisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

The peptide sequence was deduced from the synthetic DNA sequence prepd. as described in EP-363675. E. coli cells transformed with the synthetic DNA were lysed and the supernatent purified, giving a 50:50 mixture of a 154 residue bFGF (2-155) having the amino acid sequence of the 155 residue form (Abraham et al., Science, 233, 545-548, 1986) shown here but without the N-terminal Met, and a 153 residue bFGF (3-155). An adduct of bFGF formed with heparin or heperan sulphate contg. the bFGF 9-10 Leu-Pro bond can be cleaved with pepsin A or cathepsin D to cleave this bond and release a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FGF have applications such as in vivo nerve regeneration, wound repair ischaemia and corneal repair. They may also have therapuetic uses in the CNS and PNS in treatment of cell death and neuronal

This cleavage method can be used to obtain a pure form of the 146 amino acid bFGF (10-155) bFGF. The prod. can be used to treat wounds and burns.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MAAGSITTLPALPEDGGSGAFPPGHFKDPKRLYCKNGGFFLRIHPDGRVDGVREKSDPHI 60
                                                                            sequences given in AAR40158-63 represent human fibronectin (FN) fibroblast cell growth factor (FGF) fragments which were used i production of fusion polypeptides which are able to stimulate production and cell growth. These fusion peptides may be used anti-aging cosmetics and in wound healing after surgery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ZI O

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        망
                              antisense DNA or other cytotoxic agent. The linker sequence within the fusion protein may increases serum stability or intracellular availability of the TA. The conjugates of the invention are used to inhibit cell proliferation in cells carrying the particular growth factor receptor; also when TA is DNA it can be used to deliver this to cells (for gene therapy). A specific application is to prevent excessive proliferation of epithelial cells, fibroblasts and keratinocytes in the anterior eye after surgery, partic to prevent recurrence of prerygii after surgical removal, closure of trabeculectomy after glaucoma surgery and corneal clouding after excimer laser treatment. Other conditions which may be treated include complications, Kaposi's sarcoma and rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Conjugate; fibroblast growth factor; FGF; cytotoxin; saporin; eye; cell proliferation; regulation; pterygia; corneal clouding; cancer; psoriasis; rheumatoid arthritis.

                                                                                                                                                                                                                                                                                                                                            Novel fusion proteins comprise FGF linked to saporin. FGF-1 to may be used, pref. muteins in which at least 1 Cys residue is replaced by conservative Ser substitutions. The fusion proteins are potent cytocidal agents to cells bearing the FGF receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New monogenous preparations of cytotoxic conjugates and DNA -contain fibroblast growth factors and cytotoxic agents for treating FGF conditions such as tumours, diabetes and rheumat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAR70823

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is a human fibronectin amino-terminal oligopeptide, which was used in the development of a novel method for increasing the efficiency of gene introduction into a target cell using a retroviral vector. The method comprises carrying out viral infection of the target cell in the presence of a retrovirus and target cell binding substance or substances. The method can be used to effectively introduce genes into target cells for the gene therapy of cancer and viral diseases, e.g. AIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Method for increasing efficacy of gene transfer to target cell using retrovirus - by infection of the target cell in the presence of a substance which binds to the virus and a substance which binds to the target cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 1997-289294/26.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human

                                                                                                                                                                                                                                                                  AAW19595 is a biologically active recombinant human basic fibroblast growth factor (bFGF). The protein is free from all infectious impurities, substances that normally accompany it and from post-translational modification of Cys residues of native human bFGF. Recombinant bFGF is used to promote healing of wounds, bone fractures, damaged myocardial tissue etc. and, since it increases neuronal surviv and promotes neurite outgrowth, may also be used in treatment of neurological disorders such as Alzheimer's and parkinson's diseases. b may also be used for detection of specific inhibitors; for treatment of cell cultures in vitro before transplant and for inducing release of tissue plasminogen activator or collagenase, e.g. for treatment of a chronic tendency to form embolism. Recombinant bFGF can be produced on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         15-MAY-1987;

Patent No. US2002032153A1

GENERAL INFORMATION:
APPLICANT: Whitehouse, Martha Jo
TITLE OF INVENTION: Methods and Compositions for the
TITLE OF INVENTION: Treatment and Prevention of Erectile Dysfunction
FILE REFERENCE: 1671.03

CURRENT APPLICATION NUMBER: US/09/802,365

CURRENT FILING DATE: 2001.03-09

PRIOR APPLICATION NUMBER: 60/189,480

PRIOR APPLICATION NUMBER: 60/203,415

PRIOR APPLICATION NUMBER: 60/203,415

PRIOR TILING DATE: 2000.05-11

NUMBER: 500.00-11
                                                                                                                                                                                                                                                                                                                                                             Matches 155;
